

# DataPod

secure, quick to deploy and easily  
movable access control unit

**DataPod has been designed specifically for the construction sector offering a secure, quick-to-deploy and easily movable access control unit. Consisting of a full-height turnstile with secure fingerprint recognition or proximity card reader, DataPod can be installed and ready to go in under two hours and only needs a firm base and power.**

Our secure biometric and swipe card technology captures swipes in and out of site in real time and sends data to our intuitive Time & Attendance web interface where you can monitor operatives movements and view detailed reports.

Being a self-contained unit, DataPod can be easily relocated around site and offers the flexibility to change the site access point in-line with project developments and changes in site perimeter. Multiple units can be added or removed from a site to meet the changing phases of a project. DataPod can be used on a single, standalone site as well as multiple sites.

## Key Features

- Tool hatch – speeds up flow, prevents unauthorised access
- Easily relocated – only site requirement is power
- High-level tool hatch speeds up flow and eliminates unauthorised access
- Can be liveried to company colours
- Unlimited number of DataPods on any project
