

Online Inductions

DataScope's Online Induction software is a simple yet effective way to deliver key health and safety messages in a visual yet time effective way.

Bring together a range of **fully-customisable questions, images and videos** to walk operatives through **general health & safety guidelines** even before they arrive on site.

Available on any device, our online induction software has been **proven to drive significant time-saving for construction sites** across a number of sectors.

Benefits

- An average of one hour per operative saved
- Clear visibility of operative performance
- Multilingual options ensure all operatives fully understand key health & safety messages
- Results of online induction stored securely on database, leaving a clear audit trail

Minimise Risk

With the ability to create your own questions and answers, our online induction allows you to set minimum pass rates for any questions asked, ensuring that an acceptable standard of safety has been absorbed by the operative.

Flexibility & Control

Questions and slides can be added or changed at any time together with the option to add more languages meaning that you can tailor the induction for those whose English isn't their first language.

Multi Media Options

Bespoke Inductions and E-Learning

- Create different course types - e.g. construction/ non-construction and map course modules accordingly
- Create course modules with multi-media options
- Questions can be fully customised with options to add audio and photos
- Set minimum pass rates and maximum attempts
- Integrate with DataScope's [Briefings Platform](#) to allow operatives to answer medial, covid questions and more
