DataTime
clocking system

DataTime is a mobile clocking system for Time & Attendance Management on construction sites. Designed specifically for remote construction sites or sites which do not have the space or need for a turnstile, DataTime has all the benefits of our Time & Attendance Management system all contained in one highly mobile unit that can sit anywhere on site and be moved at any time.

Key Features

- Plug and Play

- Instant setup, can be simply unplugged and moved if required

- Secure and reliable biometrics, facial recognition or /swipe card technology

- Touchscreen allows for enrolment on the unit itself

- Option for health and safety/ fatigue management questions

- Integrated with the DataScope online Time & Attendance system

Fatigue Management and Messaging Options

Our DataTime unit comes with the option of displaying health & safety messaging as well as asking Fatigue Management Questions such as less than 12 hours between shift, travel times and more. All questions asked on the unit are fed directly back to our Fatigue Management System as part of fatigue and exceedance reports.
