

# Rapid Deploy Turnstile

The Rapid Deploy Turnstile has been designed to offer the construction sector a secure, quick to deploy and portable access control unit.

DataScope's biometric technology captures operatives transactions and sends data to our intuitive **Time & Attendance** web interface. The system allows real time visibility of data to monitor operative movements, being able to instantly view detailed reports and manage emergency evacuations to minimise risk.

## Key Features

- Self contained and can be easily relocated around the site, offering flexibility to change site access routes in-line with project developments and changes in site perimeters.
- Up to 4 turnstiles can be daisy changed together and run from a single power supply.
- Units are preconfigured by Datascope's in-house production team and only requires a firm base and power.
- Anti Trap safety system for no mid rotation locking.
